Mountain Weather Forecast

Yorkshire Dales National Park

Forecast valid from 06:00 on Tuesday 26 Jan 2021 until 23:59 on Wednesday 27 Jan 2021

Forecast Issued on Tuesday 26 Jan 2021 at 02:16

Confidence: High for Tuesday and Wednesday. Lower confidence for snow level and exact distribution of highest accumulations on Thursday and Friday with some uncertainty in the progress of milder air moving north over the UK.

Headline for Tuesday 26 Jan 2021: Dry morning then sleet or snow spreading east. Bitterly cold on the tops.

Weather and chance of precipitation at 600m					
Time					
06:00	09:00	12:00	15:00	18:00	21:00
Partly cloudy (night)	Cloudy	Light snow	Heavy snow	Sleet	Drizzle
Precipitation probability					
<05%	20%	70%	90%	90%	60%

Forecast for Tuesday 26 Jan 2021

Weather: Dry start continuing through the early morning with a widespread frost. Thickening cloud during the morning, with outbreaks of sleet or snow spreading east by late morning, but falling as rain below 200m. Rain, sleet or snow turning heavy for a few hours in the afternoon but will ease during the evening and turn to rain at all levels as milder air arrives from the southwest.

Chance of cloud free mountain/hill tops above 600m: 70% in morning but becoming less than 10% for the afternoon.

Visibility: Very good at most elevations at first in the morning with patchy cloud above 600m. Cloud base lowering through the morning, with visibility becoming very poor for the afternoon with extensive cloud cover above 200 or 300m. Low cloud and snow will make navigation very difficult on high slopes. White out conditions over snow cover.

**Level above which ground is expected to be frozen/snow is expected to settle.*

Meteorologist's View

Conditions deteriorating as sleet or snow arrives in the afternoon with difficult navigation conditions and a severe wind chill at height.

Recent rainfall: measured at Malham: altitude 375m

Recorded at	Last 24 hours:	Last 48 hours:	Last 72 hours:
03:00 on Tue 26 Jan 2021	0.2mm	0.2mm	0.6mm

Forecast for Wednesday 27 Jan 2021

Weather: Dull and cloudy with patchy light rain, this not amounting to much. A little brightness possible in the east of the National Park in the afternoon. Rain will spread in from the southwest from late afternoon, turning to snow on the tops.

Maximum wind: West or northwest 15mph, gusting to 30mph in the early morning. Southeast 20mph gusts 30-35mph in the evening.

Chance of cloud free mountain/hill tops above 600m: 10% at first becoming 60% in afternoon, dropping to 10% again in the evening.

Visibility: Extensive cloud above 300 or 400m at first, lifting to around 600m and perhaps clearing eastern hills in the afternoon. Generally rather hazy below the cloud, with distant ranges obscured and hills in the medium distance difficult to make out. Extensive cloud developing again in the evening, with cloud down to 300m.

Temperature: **Valleys:** Plus 1C rising to 6 or 7C.
At 600m: Plus 1 or 2C.
Freezing level: Above summits, lowering to 400m in the evening.
